

Full Working E-Commerce Website Deployment Guide

This guide explains how to make your E-Commerce website fully work online without using VS Code.
Your project contains:

1. Frontend (React/Vite)
2. Backend (Node.js/Express)
3. MongoDB Database

To make the website fully functional:

- Deploy Frontend on GitHub Pages
- Deploy Backend on Render

STEP 1: Extract ZIP File

Extract E-COMMERCE-main.zip on your computer.

STEP 2: Upload Backend to GitHub

1. Open GitHub
2. Create a new repository
3. Upload backend files
4. Commit changes

STEP 3: Deploy Backend on Render

1. Open <https://render.com>
2. Sign in using GitHub
3. Click New Web Service
4. Select backend repository
5. Build Command:
npm install
6. Start Command:
npm start
7. Click Deploy

STEP 4: Copy Backend URL

After deployment Render gives URL like:
<https://your-backend.onrender.com>

STEP 5: Update Frontend API URL

Find:
<http://localhost:5000>

Replace with:
<https://your-backend.onrender.com>

STEP 6: Configure vite.config.js

Add:

```
import { defineConfig } from 'vite'
```

```
import react from '@vitejs/plugin-react'

export default defineConfig({
  plugins: [react()],
  base: '/YOUR-REPO-NAME/',
})
```

STEP 7: Upload Frontend to GitHub

1. Create another repository for frontend
2. Upload all frontend files
3. Commit changes

STEP 8: Enable GitHub Pages

Go to:
Repository → Settings → Pages

Select:

- Deploy from branch
- Branch: main
- Folder: /root

STEP 9: Open Website

Website URL:
<https://yourusername.github.io/repository-name/>

IMPORTANT NOTES

- GitHub Pages runs frontend only
- Render runs backend APIs
- MongoDB Atlas is recommended for database
- Login, cart, products and orders will work after backend deployment
